ON THE COVER

From coast to coast, Canada's sign makers illuminate our streets with creativity and craft. Inspired by their work, *Sign Media Canada* designed this cover and assembled the 2026 Buyers' Guide—your definitive resource for signage solutions nationwide..

Design by Lisa Greco

What a time to be a sign

It's our final issue of 2025!

The December issue—a clear reader favourite—is here, offering reflections on the year gone by and tangible insights as we look ahead to 2026. If I've learned anything this year, it's that this industry doesn't rest. From constant innovation to smarter, more efficient operations, we're always on the move.

In the spirit of keeping you informed and engaged, we asked important questions and commissioned articles that explore these changes—while helping us understand the method behind this madness of transition.

Kicking off the issue on page 5, Andy Paparozzi, chief economist at the PRINTING United Alliance, guides us through the shifting landscape of the printing industry. There's much to look forward to as the sector embraces artificial intelligence (AI) and automation like never before. I attended the PRINTING United Expo in October, and the show floor truly reflected both the excitement fueling this change and the skill driving its adoption. Print, it is a-changin'.

On the other side of tech lies out-of-home (OOH) advertising—where mountains of data power a revolving door of ads tailored to our many moods. In a world drowning in information, personalized ads say, “We see you.” Kayla Caticchio of Broadsign shares what the world of OOH will look like in 2026 (page 10).

On page 14, Phillip Novak of Strange Colour Toronto takes us inside a wayfinding project that elevates signage by fully immersing it in its surrounding environment. After all, signage is to environments what spice is to food, what apps are to phones, what bowties are to tuxedos—essential, defining features that make spaces whole.

On page 22, Hugo Beauregard, the “magnet man” from Quebec, breaks down the many advantages of adding magnetic signage to your portfolio. It's sustainable, durable, and flexible—and Beauregard explains why modern signmakers should consider it. (It was great seeing him at PRINTING United!)

Before flipping to the Buyers' Guide, don't miss our annual Readers' Choice Product Awards (page 18), featuring both familiar and new faces taking home top honours. And if you're curious about what drives this industry—from wages to benefits and everything in between—our annual Salary Survey on page 25 takes the pulse of this dynamic field.

Finally, enjoy the Buyers' Guide, your one-stop resource on the industry.

Happy holidays, and enjoy the end of 2025! We'll be back in 2026 with fresh content to keep you engaged, informed, and well-fed on all things signs, printing, OOH, and more! ●

Pressing ahead in the age of AI

By Marika Gabriel

This year was a transformative one year for the printing industry. In the blink of an eye, cutting-edge technologies and artificial intelligence (AI) began integrating into workflows, revamping outputs, and accelerating the pace. Is the industry prepared—and eager—to embrace these disruptive technologies?

Just before we step into a new year, *Sign Media Canada* spoke with Andy Paparozzi, chief economist of PRINTING United Alliance's research division, Alliance Insights, to explore the forces shaping the future of digital printing. From tech and AI to sustainability efforts and workforce evolution, we delve into the ideas fueling growth.

Sign Media Canada (SMC): What has been the X factor or key trend in the printing industry in 2025, and what drove its growth?

Andy Paparozzi (AP): Uncertainty created by the Donald Trump administration's tariff policies has been the most significant.

If you know the tariff on product X is going to be Y per cent, you adjust to Y per cent. But it is difficult to adjust to policies that border on the random. The uncertainty created by no-one-knows-what's-next tariff policies has dampened sales, inflated operating costs, and squeezed margins across the printing industry.

The current PRINTING United Alliance *State of the Industry (SOI) Survey* shows how far-reaching the effects have been. Through the first three quarters of 2025, and on average, sales increased just 0.6 per cent for the 108 participants to date, growing for just 37.1 per cent. Operating cost inflation outpaced prices increases 4.4 per cent to 2.6 per cent, and real (inflation-adjusted) sales, a measure of production, decreased 2.0 per cent. Trapped between declining real sales and rising costs, pre-tax profitability increased for 24.1 per cent, was flat for 33.3 per cent, and decreased for 42.6 per cent.

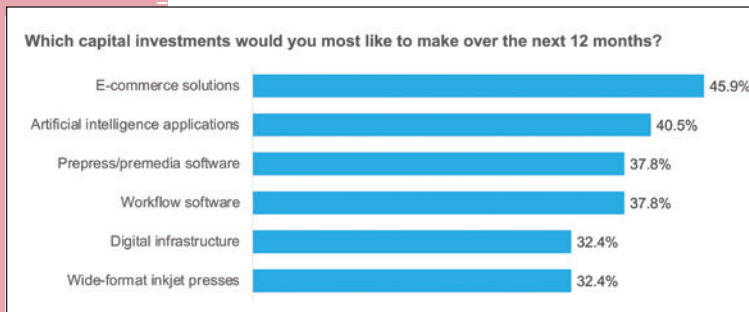

Equally telling, more than half of our research panel have or may have decreased or delayed capital investment because of the uncertainty created by tariff policies, and more than four-fifths have absorbed at least part of the tariff-induced increase in operating costs to maintain market share.

SMC: Which new digital printing technologies or workflows are industry professionals embracing most, and how are these innovations changing the industry?

AP: We recently asked SOI participants which capital investments they would most like to make and why. Across printing segments and company-size categories, e-commerce solutions and artificial intelligence (AI) applications ranked

The biggest opportunities for digital printing are where they have always been: Targeted, personalized communication.

high on the most desired lists. (They were first and second, respectively, for graphic and sign producers.)

The primary goal is to increase productivity not just in operations but companywide. E-commerce solutions extend automation directly to the client, eliminating steps and touches for both the company and the client. AI supports automating time-consuming, low-value tasks that could never be automated before, freeing time for activities that create the most value for clients, employees, and the company.

These technologies offer new ways to produce faster, more efficiently, and more profitably, making them essential to sustained success in the increasingly competitive printing industry.

SMC: With technology advancing rapidly, what educational opportunities have seen an uptick?

AP: All things related to AI. Sustained success in the printing industry—regardless of segment, company size, or geographic location—will require knowing how AI can most help my company, integrating AI with core systems and processes, and staying abreast of AI developments.

To that end, PRINTING United Alliance has launched PRINTING AI Consulting Services, headed by Amy Servi-Bonner; published a series of comprehensive reports, including *AI Adoption in the Printing Industry: From Curiosity to Competitive Advantage*, *Artificial Intelligence in the Printing*

Industry: The Journey Begins, and *State of the Industry 2024: The AI/Big Data Revolution*; and launched iLEARNING+ courses such as *AI and Color Management*, *Print Meets AI: Simple Tools for Smarter Work*, and *AI for Image Creators*.

SMC: What are North America's two biggest digital printing opportunities and challenges in 2026?

AP: The biggest opportunities for digital printing are where they have always been: Targeted, personalized communication. What's new is the amount and variety of data available to support personalization.

We talk about the AI revolution, which is really the AI/big data revolution. Big data includes "structured data," such as financials and market demographics, "unstructured" data, such as audio files, video files, clients' web browsing history, blog posts, and tweets, and "semi-structured data" such as the data generated by Internet of Things (IoT) sensors. Conventional spreadsheets and database programs do not handle unstructured data well; AI algorithms do, creating opportunities to personalize communication that would have been unimaginable a few years ago. (The quantity and variety of big data are expanding rapidly because daily activities, from browsing a website to contacting a call centre, leave a data trail.)

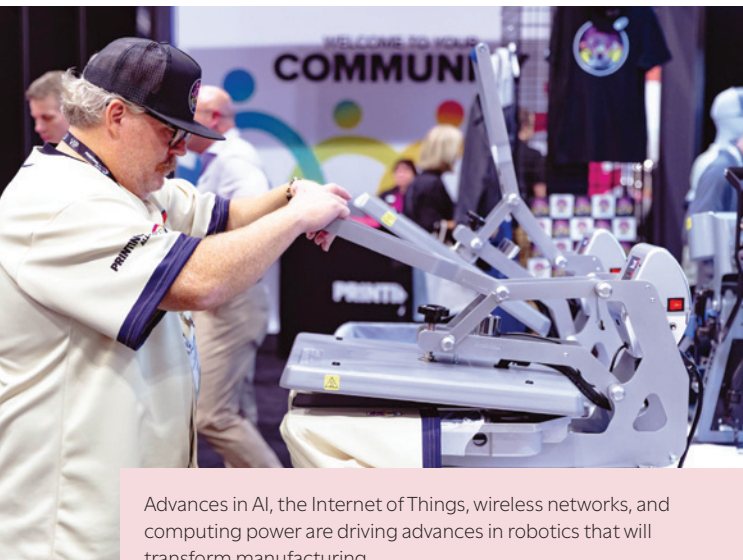

Of course, building, managing, and securing these complex databases are significant challenges. All it takes is one breach. Here again, AI algorithms can help by detecting and isolating threats in real time to minimize damage and learning from each threat to better identify the next one. Every company managing client data for any reason should be familiar with these algorithms.

SMC: How is the push for sustainability reshaping the printing industry?

AP: SOI participants included sustainability on their list of next big printing industry disruptors. Currently, 22.7 per cent have a documented sustainability plan with measurable metrics, but if they do as planned, 39.5 per cent will, within one year, and 50.4 per cent will, within three years.

Many see sustainability advancing from a regulatory requirement to an opportunity to distinguish themselves by building a brand of environmental stewardship that is particularly appealing to younger clients and employees. A representative comment: "Helping reuse and recycle our waste materials boosts employee morale, helps the environment, and is also good marketing material. It's a win all around!"

Others speak frankly about the costs and challenges of sustainability: "There are no economic benefits. Only added costs." Interruptions of current workflows are cited most frequent, followed by the cost of eco-friendly materials and processes, not knowing how to get started, a lack of technical knowledge and training, and concern about the performance of sustainable inks and materials.

Advances in AI, the Internet of Things, wireless networks, and computing power are driving advances in robotics that will transform manufacturing.

All, however, recognize that social pressures and environmental policies such as extended producer responsibility “will continue to put pressure on our industry.”

SMC: How significant is AI in the printing industry, and what impact is it having?

AP: AI is transformative. AI is not change on the margin—it is structural change that redefines what’s possible and how what’s possible gets done.

How significant is it? We put it this way in the recent *SOI Report*: “No company in our industry—no matter how successful or established—will excel without cultivating the skills and culture required by the age of AI and big data, understanding the unprecedented nature and capabilities of the analytic tools the age is creating, knowing the power, limitations, and risks of those tools, and knowing how to apply them companywide.”

AI applications can enhance every mission-critical function from prospecting to quality control to cybersecurity, and as mentioned, increase productivity companywide by automating time-consuming, low-value tasks we could never automate before.

So far, SOI participants are using AI primarily for content creation. But they plan to expand usage significantly over the next year, with the biggest increases in operations, customer analytics, sales, customer service, risk management, and cybersecurity.

AI is complex, so it is essential to conduct thorough due diligence and follow essential steps such as defining clear and measurable objectives; evaluating AI applications in terms of training and support, integration with current business intelligence systems, and data requirements; explaining to employees why AI, why now, and how it will help them be more productive; and evaluating the employee experience with AI: Is it helping them work more effectively? If not, why not?

More printing company owners and executives are recognizing the significance of AI, with comments such as these increasingly common in our state of the industry research: “You can’t sit on the sidelines with regard to AI because it is going to fundamentally change our business, so make sure you are learning about it. It isn’t

popco

magnetic attraction

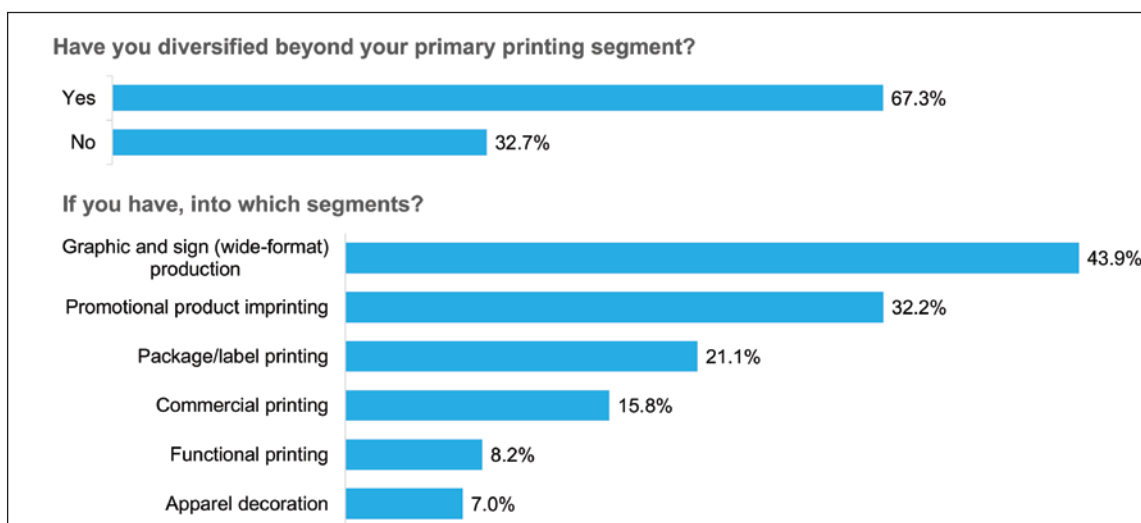

There’s no better way to display posters on metal surfaces than with Popco’s magnetic bases & poster channels. The bases feature super-strong ceramic magnets & the channels hold posters in horizontal & vertical positions. Together, they easily support signs of different dimensions & can be reused many times.

Reach out to Popco & learn how we can bring magnetic attraction to your marketing message.

popco

hang, stick & stand out

popco-usa.com

sales@popco-usa.com | 800.557.6726 | 952.352.0887

going away,” and “The big winners in our industry will master AI at all levels of the company.”

SMC: What’s the one thing you’re most excited about as you look forward to a new year in printing?

AP: I am excited by the number of SOI participants embracing a critical lesson from the turmoil of 2025: Moving forward during extreme uncertainty is risky, but sitting still and waiting for clarity is even riskier.

Most are moving forward with their business plans and priorities, capital investment supporting productivity, automation, production speed, product expansion, and promotional campaigns.

They are not rushing into anything. They know the gamut of opportunity in the printing industry is expanding, but the margin for error is shrinking. They conduct thorough due diligence, rigorously evaluate opportunities, and manage risk. They are considering not just the cost of investing but also the cost of not investing. And they are asking what they will do better in 2026 than they did in 2025 because in the increasingly competitive printing industry, you are either moving ahead or falling behind—there is no longer a third option.

SMC: What’s one futuristic printing idea you’d love to see realized in the next five years—even if it sounds far-fetched?

AP: AI-driven smart robotics. Advances in AI, the IoT, wireless networks, and computing power are driving advances in robotics that will transform manufacturing. Where robots once performed a single routine task, smart robots can automate processes from quality control to fulfillment, perform an expanding range of complex activities, move independently through production environments, and communicate with humans through voice, text, and gestures—all the while learning as they do.

Humanoid smart robots such as collaborative robots (cobots), autonomous mobile robots (AMRs), and machine

vision robots will work alongside humans in shared work environments, moving freely, navigating obstacles, and defining their paths in real time in even complex environments without human intervention, increasing productivity and easing the printing industry’s chronic labour shortages.

SMC: Flashback to 10 years ago: What was the most significant disruption then, and how much has it changed how we print today?

AP: Diversification was the biggest disruptor. It took two forms.

First, printers began adding non-print services such as mailing, fulfillment, database management, web page design, and 1:1 customized marketing programs that combined print and electronic communication. They got involved in their clients’ work earlier, stayed involved longer, and satisfied a broader range of their communications needs, expanding their goal from reproducing an image on a substrate to helping clients communicate more effectively with their clients, in print or otherwise.

Second, printers began to expand beyond their primary printing segment. PRINTING United Alliance calls this “convergence.” Boundaries between who does what, how, and for whom broke down as everyone got into everyone else’s business, increasing opportunity but also increasing competition.

Nearly 70 per cent of SOI participants have diversified beyond their primary market. Among the commercial printers, 67.0 per cent have diversified into graphic and sign (wide-format) production, and 25.2 per cent into promotional product imprinting. Among graphic and sign printers, 43.0 per cent have diversified into commercial printing, and 21.0 per cent into promotional product imprinting. Among apparel decorators, 53.8 per cent have moved into promotional product imprinting and 32.3 per cent into graphic and sign production. ●

MAGNUMISM

➔ THE ATTRACTION TO MAGNETIC MEDIA ➔

At **Magnum Magnetics**, we call it **Magnumism**—that magnetic pull toward quality, creativity, and American-made excellence.

As the largest U.S. manufacturer of flexible magnets, we've spent over three decades perfecting printable sheeting, rolls, strips, and extrusions that power everything from wide-format graphics to OEM solutions and retail products.

Proudly made in the U.S.A., trusted worldwide. Because when it comes to magnetic media, *the attraction is real.*

OOH is further cementing its position in the modern media mix—not just as a traditional awareness driver, but as a channel that can deliver precision, flexibility, and cultural impact.

Photos courtesy Broadsign

2025: An evolutionary year for OOH

By Kayla Caticchio

A medium defined by its ability to connect brands with audiences in shared, real-world spaces that drive engagement, out-of-home (OOH) is one of advertising's most storied channels. Despite the market shifts it's faced over the years, the industry has adapted to endure the test of time. 2025 proved no exception, marking another key chapter in OOH's evolution between the growth of in-store media, the introduction of more automated transactional processes, and the smarter use of data and dynamic creative across campaigns.

These developments helped elevate the medium's profile among media buyers and set the stage for new growth in

2026, but they also helped to drive new conversation around OOH's full-funnel potential. As we prepare to turn the page on 2025 and head into a new year, it's no surprise that more media buyers are eyeing OOH as they start planning around several tentpole events scheduled for 2026. All signs point toward an exceptional year ahead for the industry.

In-store media network barriers fade

One of the biggest areas driving new growth in OOH is in-store media. In and around retail environments, signage has become a powerful tool in the rapidly evolving retail media network (RMN) toolbox. As shopper expectations shift and RMNs gain traction, advertisers are rethinking how they

can leverage in-store media to bridge the physical and digital worlds.

This is largely because shoppers move through different channels quickly—browsing and comparing products online and across consumer electronics, often before making their final decision in-store. In-store media can influence these decision-making moments, allowing brands to interact with consumers at the point of final purchase. Digital screens at entrances, point-of-sale (POS) signage, and proximity-based displays can extend the impact of larger RMNs. They offer advertisers visibility during a pivotal moment in the purchase journey while also enabling retailers to enhance the shopper experience.

Measurement advances are also boosting the value proposition of in-store media networks. Brands can now attribute in-store OOH exposure to outcomes, like sales uplift, tying campaigns directly to business results. This valuable opportunity not only raised more interest in in-store media from consumer packaged goods (CPG) brands this year but also enabled endemic and non-endemic advertisers to reach consumers with more contextual relevance during the shopping experience.

Thankfully, in-store media networks became less complicated for retailers to stand up, manage, and monetize this year. Technology developers like Broadsign also provided insights into how retailers can build more open networks that can scale.¹ More open infrastructures maximize the use of third-party technologies without the constraints of leveraging an all-in-one provider or the costs and resources required to build a network from scratch. Plus, they are easier to scale to take advantage of emerging innovations. We only expect to see more in-store media networks launch in 2026, and both retailers and advertisers to start unlocking their full potential.

OOH transactions become more automated

If artificial intelligence (AI) is the future of ad efficiency, automation is the foundation OOH needs to get there. While programmatic digital out-of-home (pDOOH) has brought significant progress, it still represents only a fraction of total spend. Programmatic benefits have also primarily been confined to digital screens, while static OOH, which accounts for the majority of available inventory, remains tougher to buy.

Securing OOH placements directly often requires a lengthy, manual process—multiple negotiations, manual spreadsheets, and multiple back-and-forth exchanges with media owners. This drawn-out practice is one of the most significant barriers keeping OOH from competing on a level playing field with other digital channels.

As agencies faced increasing pressure in 2025 to do more with less, automating OOH transactions quickly became necessary. It became clear that freeing strategists from manual booking processes will be central to allowing them to focus on higher-value activities like creative ideation,

2026 offers a chance to build on the momentum of 2025 to ensure OOH continues to thrive as one of the most innovative and impactful advertising mediums in the world.

measurement, and client strategy. Buyers want the same ease of reserving OOH inventory that they get with omnichannel demand-side platforms (DSPs).

Technological advancements emerged in 2025 to fill this gap.² It opened new doors for buyers to book OOH inventory ahead of a campaign using programmatic pipes. While it represented a significant leap forward for the industry, further collaboration across the buy- and sell-side is required to move the needle further. Agencies, media owners, tech providers, and industry organizations must come together to define standards and simplify workflows. We anticipate steady progress on this front in the year to come.

First-party data approaches get smarter

More advertisers turned to their own first-party data to drive precision and performance in 2025. Drawing real-time and historical data from loyalty programs, customer relationship management (CRM) systems, app interactions, and purchase history, they uncovered smarter ways to target audiences without compromising privacy. OOH ultimately benefited from this wave.

We saw more OOH campaigns driven by insights such as recent store visitors or lapsed buyers, and advertisers use that data to extend audience reach into high-traffic environments. While this may have once required custom integrations and manual workarounds, technological innovations brought it within closer reach for buying teams this year.

DSP providers, like Broadsign, launched solutions that made it easier to upload and activate data without a high barrier to entry, whether for small geo-based lists or complex CRM segments.³ This development helped to equalize data-driven OOH, opening the door for more mid-sized brands, in addition to global players.

While the industry made great progress on this front, challenges remain. Data silos between CRM and media teams still slow adoption, and perceptions of cost and complexity can deter advertisers. However, as platforms continue to simplify onboarding, the benefits are undeniable: smarter targeting, higher efficiency, and reduced waste.

Layering first-party data with third-party audience insights can also create a more holistic view of consumer

Dynamic creative optimization (DCO) is unlocking new possibilities for advertisers to capture the attention of audiences and drive brand engagement in new ways.

behaviour, helping brands find new customers who share traits with their most valuable segments. If 2025 taught us anything about OOH's embrace of first-party data, it's that the industry has moved beyond broad awareness into precision-driven strategy and execution, and next year, we expect forward movement.

Demand for DCO grows

Dynamic creative optimization (DCO) is unlocking new possibilities for advertisers to capture the attention of audiences and drive brand engagement in new ways. 2025 certainly saw more campaigns leverage the practice. Linking creative assets to points like weather, time of day, audience demographics, location, and other triggers, advertisers served up ads that felt immediate and contextual and ultimately drove brand engagement.

More agencies and brands experimented with the automation of large-scale personalization, deploying hundreds of creative variations across markets with minimal manual effort. This trend gave way to campaigns that showcased how DCO can enable consistency in brand voice while still reflecting local context.

At the end of the day, DCO continued to show its value as a cost-efficient way for media buyers to stretch media budgets, ensuring ads are constantly improving every day to connect with audiences. At the same time, it enhanced ad relevance for consumers, turning OOH from a static backdrop into a connected layer of everyday life. As more brands experiment with DCO next year, campaigns will not just become more visible but also timely, adaptive, and uniquely engaging.

Planning for tentpole events starts early

Though 2025 was packed with exciting developments, much of the industry's energy is already being directed toward what OOH is capable of in 2026. With the Super Bowl, Winter Olympics, and FIFA World Cup Championship all scheduled for next year, exciting cultural moments are a given. Given the scale and shared experiences these events present, advertisers are already laying the groundwork to deliver campaigns that capitalize on them.

Campaign planning for these tentpole events is happening earlier than ever, with brands securing prime OOH inventory in advance and exploring global cross-market activations. Advancements in programmatic and automated OOH are making it easier to execute these campaigns with the flexibility to adjust creative on the fly as circumstances shift. For media owners, the challenges and opportunities lie in preparing inventory, standardizing processes, and aligning with global buying platforms. As for buyers, it's all about integrating OOH into omnichannel activations that span online, mobile, broadcast, and CTV.

Projections for 2026

In 2025, OOH proved a medium in transition, and one that is becoming more diverse, accessible, data-driven, and creatively agile. In-store media networks moved from concept to reality, and automation broke down accessibility barriers to OOH. First-party data powered smarter, more privacy-compliant targeting across campaigns, while DCO experimentation ensured more contextual relevance at scale.

As these trends continue to take shape, OOH is further cementing its position in the modern media mix—not just as a traditional awareness driver, but as a channel that can deliver precision, flexibility, and cultural impact. For buyers, media owners, and tech providers, 2026 offers a chance to build on the momentum of 2025 to ensure OOH continues to thrive as one of the most innovative and impactful advertising mediums in the world. ●

Guided by design

Timber, typography, and thoughtful design combine at George Brown's new Limberlost Building

By Phillip Novak

As part of George Brown College's ongoing expansion and commitment to innovation, the new Limberlost Building marks a significant architectural and academic milestone for the institution. Designed by Moriyama + Teshima Architects in collaboration with Acton Ostry Architects, the 20,903.1 m² (225,000-sf), 11-storey mass timber building establishes a new benchmark for urban learning environments. Our team was engaged to conceive a custom signage, wayfinding, and environmental graphics program that would seamlessly integrate with the architecture, reflect the college's identity, and enhance the daily experience of students, faculty, and visitors.

Our scope encompassed the full planning, design, documentation, tendering, and production oversight of a comprehensive, project-specific signage and environmental graphics program. The building's scale, materiality, and prominence in downtown Toronto, demanded a program that would functionally support navigation while serving as

a distinctive and cohesive visual layer within the architectural experience.

The contract

Having recently partnered with Moriyama + Teshima on the wayfinding program for 60 Mobile Drive, the new headquarters of the Ontario Secondary School Teachers' Federation, our team was approached to help realize George Brown College's vision for a distinctive, site-specific signage program at Limberlost.

Building on this established working relationship, we joined the project as a sub-consultant, tasked with developing a design language that would complement the architecture while reflecting the college's culture of innovation, accessibility, and inclusivity. Our prior experience with complex academic and office environments provided the client and architects with confidence that our approach would balance functionality, esthetic refinement, and durability.

Both paper mock-ups and full-scale prototypes were used to verify sizing, placement, and architectural integration.

The project

The process began with a conceptual kickoff meeting in August 2023, bringing together the client, architectural team, and our studio to review early design directions and establish performance, esthetic, and user experience goals. From the outset, we aimed to strike a balance between technical functionality—ensuring accessibility, clarity, and long-term maintainability—and a design expression that resonated with the building's materiality and spatial experience. Drawing inspiration from the exposed timber structure and natural light that define the architecture, we explored ways to integrate warm finishes and materials and precise detailing into a cohesive signage system.

Design continued through the fall and winter, from September 2023 to January 2024, during which we refined the visual and functional aspects of the program through iterative progression and collaborative meetings. This process culminated in a tender-ready specification package, defining the full suite of sign types, materials, mounting methods, and graphic standards. The program was issued for tender in May 2025, followed by fabrication and installation over the summer months to ensure the building was ready for students in September 2025.

The scope

The program consists of more than 500 individual sign instances, ranging from exterior building identification types to interior directional, directory, area, and room identification signs, as well as large-scale level identification wall graphics in the two primary stairwells. Additionally, a donor recognition program is currently being implemented as a direct extension of the wayfinding system, further demonstrating the adaptability and extensibility of the design language.

The scope required a careful calibration of hierarchy, legibility, and architectural integration, ensuring that each sign type fulfilled both functional and esthetic objectives while contributing to a unified program across all levels of the building.

The design

While George Brown College maintains an existing campus-wide signage standard, both the client and architect expressed a strong desire for a bespoke program specifically tailored to the Limberlost Building. In response, we developed an entirely new family of sign types featuring a custom colour palette, refined typographic conventions, and a suite of original pictograms and wayfinding maps.

The system not only aligns with the architecture's sense of craft and clarity but also emphasizes the legibility and flow through the interior spaces. The only elements retained from the existing standard were two GBC-branded pedestrian pylons at the primary entrances, which we re-specified to improve durability and longevity.

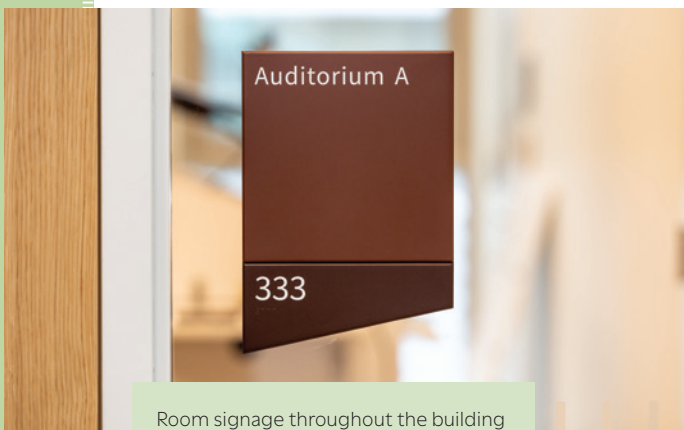

The fabrication

Fabrication was undertaken by Philcan Group, with whom we collaborated closely to translate the design into production. The fabrication phase was highly interactive, involving multiple rounds of shop drawings, prototype reviews, and material submittals to ensure fidelity to the approved design. Our goal throughout this stage was to maintain design precision while accommodating fabrication realities, ensuring that each component balanced technical and esthetic requirements.

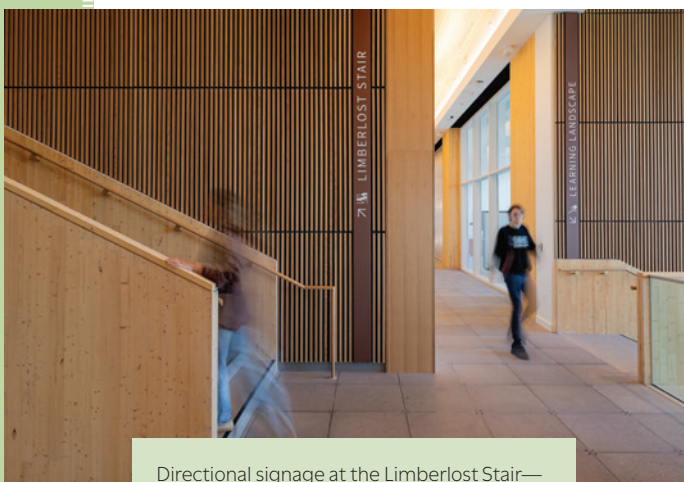

The family of sign types spanned all scales and installation locations, including:

- Internally illuminated channel letters on the main entrance canopy
- Lettering affixed to the exterior daycare play area fence
- Room identification signs of varying hierarchy
- Directional signage as both plaques and pin letters
- Elevator and building directories
- Area identification lettering and pictogram instances

Primary materials included laser-cut and painted acrylic with tactile and flat direct-to-face printed lettering, as well as physical vapour deposition (PVD)-coated and painted stainless steel. Each finish was selected for its durability, esthetic clarity, and compatibility with the building's architecture.

Room signage throughout the building uses both flat and tactile messaging.

Directional signage at the Limberlost Stair—a key intersection of level 2 of the building.

Challenges

One key challenge was finalizing the primary colour palette for the program. The initial selection was deliberately bold and unexpected, intended to contrast with the architecture and spark visual interest. Through an extensive alignment process, the palette was refined to harmonize with interior furniture selection and the unique copper-toned building envelope, resulting in a program that feels integrated with the architecture while maintaining a distinct identity.

Another challenge involved on-site verification of key sign type locations, particularly those that were highly integrated with architectural features, such as large directional signage on wood-slatted walls. While a thorough mock-up process was performed for key sign types like

building directories and directionals, multiple site visits were necessary to confirm accurate placement, alignment, and interaction with surrounding materials.

Primary messaging panels of directory, directional, and room sign types were also designed to be replaceable for updating with minimal wastage of materials. Subsequently, the sign faces make use of countersunk and concealed magnets for mounting. Extensive testing was needed to verify the appropriate strength of the adhesion to mitigate typical tampering.

Installation

Philcan Group performed the installation on a floor-by-floor basis. Temporary signage was first installed to satisfy temporary occupancy permit requirements, followed by the final signs. Our team regularly reviewed newly completed installations and co-ordinated closely with both construction management and Philcan, ensuring precision in placement, alignment, and consistency throughout the building. Specialized equipment included lifts and scaffolding where required for overhead signage, and precision tools for alignment and leveling of components.

Conclusion

The completed signage and wayfinding program for the Limberlost Building exemplifies collaborative design at its best. It supports intuitive movement throughout the complex, multi-level structure while reinforcing the architectural character and environmental ethos of the building. More than a navigational tool, the system provides a cohesive and welcoming experience, communicating George Brown College's identity and commitment to innovation through materiality, form, and detail.

Currently, we are not implementing AI in our design and planning process and have no immediate plans to do so. Our experience demonstrates that successful wayfinding programs emerge when design and aesthetics combine with inherently functional elements that are simple, universally accessible, and empower users to navigate independently. Above all, a successful project outcome depends on clear communication between an engaged client, a design team willing to exceed minimum expectations, and a fabrication partner bringing expertise and foresight to the process. ●

Phillip Novak is the team lead at Strange Colour, Toronto. Founded in 2018 and based in Toronto, Ont., Strange Colour works independently and collaboratively with a focus on planning and design of signage and wayfinding systems and environmental graphics programs.

The team is motivated by the desire to be challenged, delighted, and met by the environments they find themselves in. Their intent is to contribute to spatial initiatives that recognize the ever-evolving spectrum of wants and needs, whether for work, study, or play.

WIDE FORMAT PRINT MEDIA

Nekoosa offers a complete portfolio of wide format solutions – including pressure sensitive print media, cut films, mounting films, and overlaminates – each engineered for exceptional print quality, durability, and ease of use. Our expertise builds on decades of innovation from **Catalina Graphic Films** and **Mojave Digital Media**, trusted brands known for quality and craftsmanship in the graphics industry. Today, that same proven technology and dedication to excellence live on under the Nekoosa brand, delivering the dependable, high-performing products printers rely on every day.

Why Nekoosa?

Versatile – We developed a comprehensive range of wide format specialty media meticulously crafted to suit even the most unique applications.

Quick turnarounds? No problem. With a strong distribution network and responsive service team, Nekoosa ships standard and custom sizes promptly to keep your projects moving.

Quality – Nekoosa consistently sources the best materials our industry has to offer. We hold ourselves to the highest standard of offering high quality products.

READERS' CHOICE PRODUCT Awards 2025

Sign Media Canada's 2025 Readers' Choice Product Awards offered you the chance to vote for whose products are the best in the industry. The competition included several products, highlighting the various materials used in the industry to really make it shine. These top picks have been recognized for their excellence in the industry, showcasing innovative materials and outstanding quality. Join us in celebrating the best products of 2025.

Winners were selected in five categories: Display Systems; Equipment; Letters, Sign Faces & Wayfinding; Substrates; and Supplies.

This year's Readers' Choice Product Award winners include Verde Fastframe Inc., Spicers, Gemini, Lintec of America Inc., and Custom Edge.

Each recipient will receive a digital trophy recognizing their product as a *Sign Media Canada's* 2025 Readers' Choice Awards winner. ●

Display Systems | Verde Fastframe Inc.

Innovative and Sustainable Fabric Frame Hardware

Introducing the Swiss Army Knife of silicone edge graphic (SEG) framing systems. Available exclusively from Resource Integrated and Verde *fastframe*, the Verde *fastframe* has been designed to address today's wide variety of framing needs.

- Use indoors or outdoors.
- Wall-mounted, hanging, and mobile displays.
- Graphics can be installed front-mounted, gallery wrapped, and double-sided.
- An optional V-stand also allows you to use it as a free-standing display on all floor surfaces and tabletops.

Versatile

The high-impact polystyrene frame is available in any colour and size. Use for decor walls, pop-up banners, retail displays, hanging window signage, outdoor event signage, and more.

Saves time

Simply assemble the frames and panel connectors together, insert the fabric graphic panel by guiding the keder/beading into the specially designed channel, and you're done.

Saves money

More cost-effective than aluminum/vinyl-panel systems. There's no need to purchase additional hardware to assemble, and the fabric graphic panels can be folded, so you don't have to spend extra on oversized shipments.

Eco-friendly

Made in Canada with 25 per cent reclaimed materials.

The Verde *fastframe* is a patent-approved, sustainable display and signage system that delivers a cost-effective and simple way to display your communication message in any environment.

Equipment | Spicers

Mimaki CJV200 Series

Maximize your printing capabilities with the Mimaki CJV200, a powerhouse in a compact package. Designed to deliver both indoor and outdoor durability, the CJV200 offers exceptional print quality without sacrificing space. This machine features an integrated cutter and user-friendly software, making it the ideal stand-alone solution for your printing needs.

An advertisement for Uline Shipping Supply Specialists. The central focus is a brown cardboard box with the 'ULINE' logo in a blue box and the text 'SHIPPING SUPPLY SPECIALISTS' below it. Surrounding the box are various shipping supplies: yellow and red packing tape, rolls of brown cardboard, a blue tape dispenser, a roll of white bubble wrap, a red packing tape dispenser, and yellow shipping envelopes. The text 'FULLY STOCKED! READY WHEN YOU ARE' is prominently displayed in the center. Below this, a red box contains the text 'ORDER BY 6 PM FOR SAME DAY SHIPPING'. At the bottom, the phone number '1-800-295-5510' and the website 'uline.ca' are listed.

Letters, Sign Faces & Wayfinding | Gemini

Dimensional, Dynamic, Dynamite! Make an impact with Assembled Signage by Gemini

There is nothing more dynamic in dimensional signage than using the power of layers to make an impact on your next client project. Leave the most complicated assemblies to Gemini to complete for you, turn-key ready for installation.

Have a large project requiring a multi-piece installation? Gemini offers you our engineering support to ensure that you have a puzzle piece fit after the final install to assure your client of a seamless presentation of their brand. We often think that the larger a project is, the more challenging it is to assemble; however, just the opposite is true. Lean on our expert assembly teams to complete detailed letter panels and wayfinding projects. No hassle and no waste in your sign shops, just completed units ready for installation.

Substrates | Lintec of America Inc.

Sustainability with New Recycled Film

Lintec of America is launching a wet apply film made of recycled components as part of its corporate mission to raise awareness of sustainable manufacturing practices within the graphic, print, and visual communication industries.

ECO-2000 ZC offers remarkable durability in a film structure that is optically clear, printable, and with 80 per cent recycled content. It is backed with a clear film liner to ensure optical clarity. With a high-quality promotional glass manifestation product that stands out and is also eco-friendly, this film's flexibility and efficiency provide end-users with the scope they need to rebrand and refresh their campaigns as often and as quickly as required.

The facestock is manufactured with a minimum of 80 per cent recycled polyethylene terephthalate (PET) material. This recycling method diminishes the consumption of petroleum resources, resulting in a 24 per cent reduction in CO₂ and 40 per cent less energy used during the film manufacturing process. For LINTEC, this represents a small yet significant step forward towards the preservation of the environment. Increased awareness of sustainable and environmentally-friendly production strategies has recently led companies to re-evaluate their business practices and pursue the development of more eco-friendly products.

Supplies | Custom Edge

Promotional Products

At Custom Edge, we partner with top suppliers in the promotional industry to provide you with high-quality products that both staff and customers will cherish for a long time. Our team excels at devising innovative ways to make a bold statement about your brand. We expertly apply your logo and other brand elements to a variety of promotional products, signage, digital prints, canopy tents, flags, and apparel. However, we offer more than just logo application. Understanding that your brand is more than just a logo, we strive to create items that reflect your brand's essence and build a community around it. Our goal is to craft unique,

memorable items that people will want to keep. When you work with us, you gain a distinctive edge that sets you apart from the competition.

PROUD CANADIAN MANUFACTURER SINCE 1979.

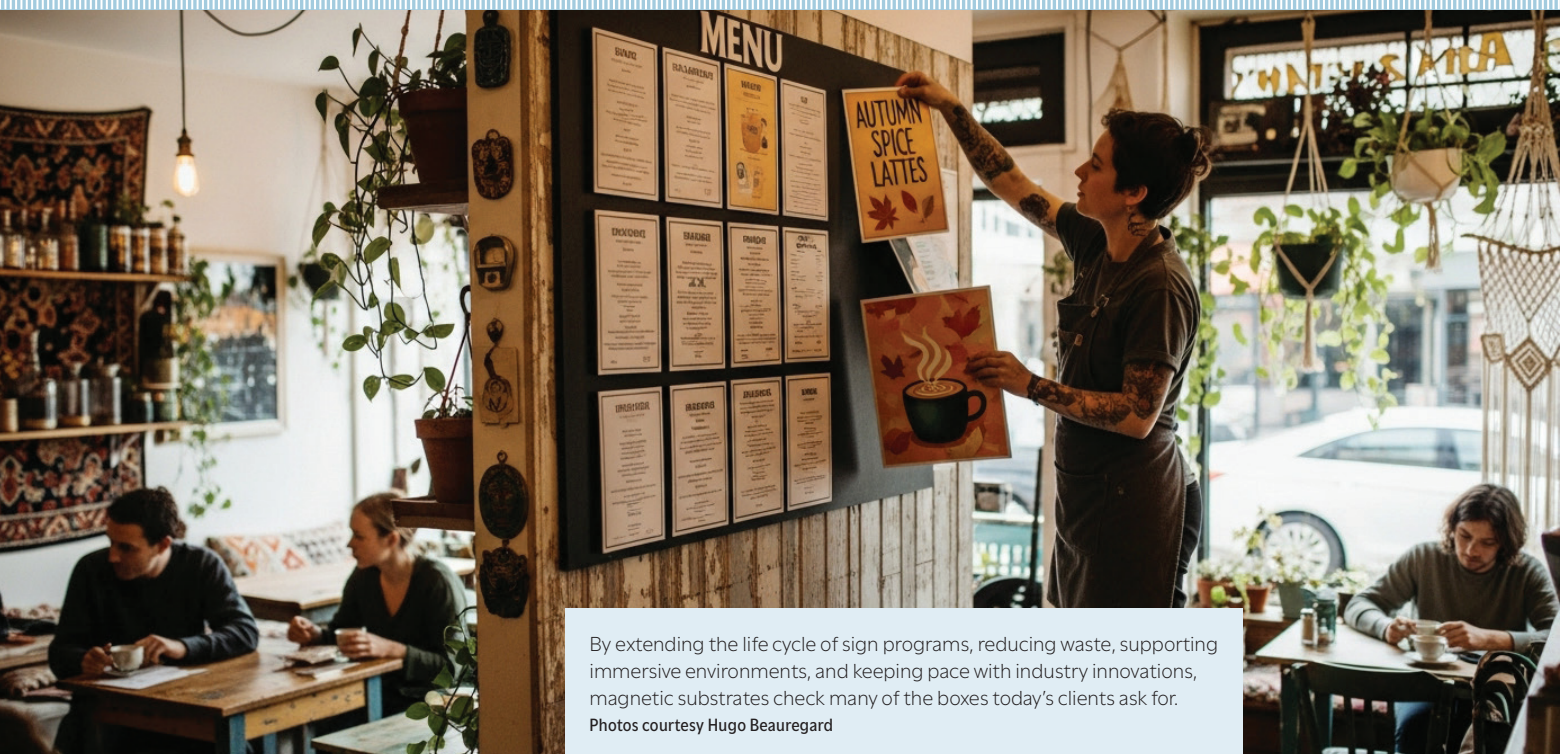

Trusted Manufacturing. Local Service.

- Local manufacturing supporting Canadian communities
- Dedicated Canada-based service team
- Clear, CAD-based pricing

GEMINI

By extending the life cycle of sign programs, reducing waste, supporting immersive environments, and keeping pace with industry innovations, magnetic substrates check many of the boxes today's clients ask for.
Photos courtesy Hugo Beauregard

Mastering magnetic signage

A practical guide for the modern signmaker

By Hugo Beauregard

In today's sign industry, versatility is everything. Clients demand speed, creativity, and solutions that look good and support sustainability goals. At the same time, signmakers are under pressure to deliver programs that last longer, change faster, and provide more value with fewer resources.

Magnetic signage offers a compelling answer to these challenges. Long appreciated for its simplicity and reusability, magnetic media is emerging as a premium substrate option across retail, experiential design, events, and beyond. This shift represents more than just another material for signmakers—it's an opportunity to expand service offerings, improve client retention, and stand out in a competitive marketplace.

The following explores the key benefits of magnetic signage, with practical guidance on how to optimize its use and avoid common pitfalls.

Longevity: Extending the life cycle of sign programs

One of the greatest advantages of magnetic graphics is their ability to extend the usable life of a sign program compared to traditional substrates.

Rigid panels, foam boards, and other single-use substrates are often discarded after one campaign. With magnetic systems, the base layer remains in place, while the printed magnetic graphic can be swapped out as needed. This approach turns a single installation into a long-term system.

Take, for example, a retail menu board program. Instead of replacing the entire board with each seasonal update, the frame and backing stay intact. Staff simply apply a new printed magnetic overlay. The infrastructure investment continues to deliver value year after year, reducing both production costs and client frustrations around waste.

This longevity isn't only about durability—it's also about client loyalty. When a signmaker provides a system that supports seamless refreshes, the client is more likely to return for repeat graphics, creating ongoing revenue rather than one-time jobs.

Sustainability: Reducing waste with reusable substrates

Sustainability has become a central consideration for brands and organizations of every size. Many clients actively seek sign solutions

that minimize environmental impact without compromising quality or design flexibility.

Magnetic signage supports these goals in several ways. First, the reusability of the magnetic base reduces reliance on single-use plastics and rigid boards, which often end up in landfills. Instead of producing a new sign for every campaign, signmakers can produce a lightweight magnetic overlay that integrates into the existing system.

Second, magnetic graphics reduce the carbon footprint associated with transportation and logistics. Magnetic substrates are lightweight and rollable, meaning shipping is often more efficient than heavier, rigid panels.

Finally, for brands with environmental, social, and governance (ESG) commitments, magnetic systems provide a visible way to showcase sustainable practices. When a company can demonstrate that its sign program has reduced material waste, it strengthens its credibility with consumers and stakeholders alike.

For signmakers, this alignment with sustainability initiatives can be a powerful differentiator in winning projects.

Experiential: Designing for flexibility and immersion

The rise of experiential marketing has reshaped how spaces are designed. Whether it's a pop-up shop, interactive museum exhibit, or immersive retail environment, the demand for flexible, reconfigurable signage has never been greater.

As the demand for adaptable, environmentally responsible signage continues to grow, those who embrace magnetic systems today will be well positioned to lead tomorrow.

Magnetic substrates are uniquely suited for these environments. Their ease of installation and removal allows designers to quickly refresh spaces, layer graphics, or experiment with modular storytelling. For instance, a museum exhibit might use magnetic wall panels to allow curators to rotate content as exhibitions change, without requiring a full rebuild.

Experience Gfp Smart Finishing Technology!

Enhance your finishing process with the **GFP 663TH**, a powerful 63" wide format top heat laminator. Designed for speed and precision, it ensures flawless lamination on even the most challenging materials.

Key features include:

- Digital touchscreen interface
- Electronic gap adjustment
- Operator warning alerts
- Swing-out Quick Grip shafts
- Built-in side slitters

Boost productivity and achieve consistent, professional results.

For more information or to see the GFP 663TH in action, visit our virtual showroom at gfpartnersllc.com.

Magnetic materials continue to evolve, with innovations expanding their applications and appeal.

In retail, magnetic substrates enable seamless seasonal transformations. A flagship store can maintain the same walls and fixtures while updating visuals for holidays, product launches, or limited-time offers. This agility not only reduces downtime but also ensures a consistently fresh environment for shoppers.

Interactive applications are also growing. Some brands use magnetic pieces as part of tactile displays, inviting customers to move, swap, or reconfigure elements themselves. This level of engagement enhances the experiential impact and helps brands stand out in crowded markets.

Trends: Innovations signmakers should watch

Magnetic materials continue to evolve, with innovations expanding their applications and appeal. Sign professionals should keep an eye on several key trends:

Wider formats: Magnetic rolls up to 1.5 m (60 in.) wide are now available, enabling seamless large-format installations that were once impractical. This shift opens doors for wall murals, oversized displays, and full retail feature walls.

Improved printability: Advances in coatings have enhanced the colour fidelity and durability of printed magnetic graphics. Signmakers can now achieve the same vibrant, high-quality results expected from more traditional substrates.

Magnetic wall systems: Layered wall systems using a steel receptive base and interchangeable magnetic overlays are gaining traction in interior décor and retail design. They allow for rapid rebranding or seasonal campaigns without needing permanent construction.

Retail media growth: As retailers monetize in-store space through media networks, magnetic signage provides a cost-effective platform for rapidly changing campaigns. Signmakers who understand this trend can position themselves as key partners for retail clients.

Together, these innovations are expanding the creative potential of magnetic signage and reinforcing its role as a serious substrate for professional signmaking.

Installation: Preparing surfaces for success

While magnetic signage is simple in concept, successful installation requires attention to detail. Proper surface preparation and material selection make the difference between a flawless program and one plagued with performance issues.

First, ensure that the surface is smooth, clean, and non-porous. Dust, oil, or irregular textures can weaken adhesion and create gaps

between the magnet and surface. A thorough cleaning step before installation is essential.

Second, understand the difference between magnetic receptive surfaces and true magnets. A receptive layer (such as steel sheeting) allows thin magnetic graphics to cling, while thicker magnetic substrates may not be necessary. Choosing the right system reduces weight and cost while ensuring performance.

Finally, consider environmental conditions. High humidity or extreme temperatures can impact adhesion, particularly at the edges of the graphic. For long-term installations, verify that the chosen environment is suitable for magnetic media.

By taking these precautions, installers can ensure that magnetic graphics perform as intended and maintain their professional appearance over time.

Mistakes: Common pitfalls and how to avoid them

Despite its advantages, magnetic signage is not foolproof. Many common mistakes can undermine an otherwise successful project.

Incompatible surfaces: Attempting to apply magnetic graphics to non-metallic or uneven surfaces without a receptive base will lead to failure. Always verify compatibility first.

Incorrect thickness: Using a magnet that is too thin for the application can cause slippage, especially on vertical surfaces. Conversely, overly thick magnets may be unnecessary and add cost.

Edge curl: If graphics are not stored flat or rolled properly, edges can curl, compromising the appearance. Training staff on proper handling prevents this issue.

Skipping surface prep: Rushing installation without cleaning or leveling the surface often results in bubbles, gaps, or poor adhesion. This is one of the simplest mistakes to avoid, yet one of the most common.

Overlooking client training: Clients often need guidance on how to handle, store, and swap magnetic graphics. Providing this education ensures the longevity of the program and reduces callbacks.

By recognizing and addressing these pitfalls, signmakers can deliver a consistently positive experience with magnetic substrates.

A future-proof substrate for signmakers

Magnetic signage is no longer a niche solution—it's a versatile, sustainable, and profitable tool for the modern signmaker. By extending the life cycle of sign programs, reducing waste, supporting immersive environments, and keeping pace with industry innovations, magnetic substrates check many of the boxes today's clients are asking for.

For signmakers, the opportunity lies not only in producing high-quality magnetic graphics but also in positioning themselves as trusted advisors who can guide clients toward smarter, more flexible systems. In doing so, they can strengthen client relationships, create recurring revenue, and stay ahead in a fast-evolving industry.

As the demand for adaptable, environmentally responsible signage continues to grow, those who embrace magnetic systems today will be well positioned to lead tomorrow. ●

Hugo Beauregard is a sales manager and specialist at magnetic solutions provider, Simple Signman.

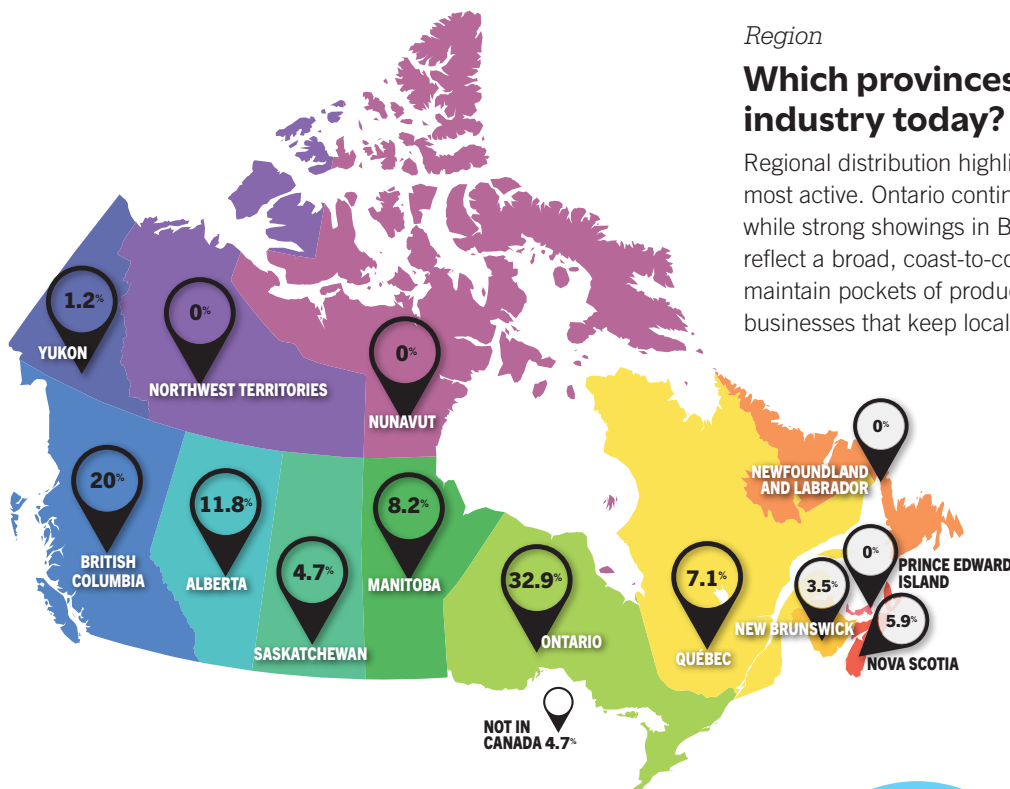

2025 Salary Survey

AN INDUSTRY IN MOTION

Inside the pay, experience, and outlook of Canada's sign professionals

By Marika Gabriel

Each year, *Sign Media Canada* surveys professionals across the country to uncover how the sign industry is changing—who's working where, what they earn, and how they feel about the future. The 2025 results, based entirely on hundreds of anonymous answers by professionals across the country, paint a picture of an experienced, loyal, and largely satisfied workforce navigating steady technological and business shifts.

Region

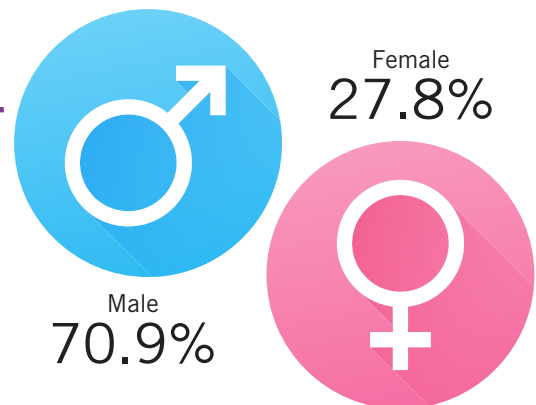

Which provinces lead the sign industry today?

Regional distribution highlights where the sign industry is most active. Ontario continues to lead as the national hub, while strong showings in British Columbia and Alberta reflect a broad, coast-to-coast presence. Smaller provinces maintain pockets of production and craft-focused businesses that keep local markets thriving.

Gender

Who's represented in the workforce?

Gender balance remains an ongoing challenge. The sign industry still attracts more men overall, but more women are entering business ownership, management, and design-focused roles across the country.

Prefer not to disclose 1.3%

What is your age?

Under 24	0.0%
25 to 29	3.8%
30 to 34	0.0%
35 to 39	1.3%
40 to 44	10.1%
45 to 49	11.4%
50 to 54	12.7%
55 to 59	24.1%
Over 60	36.6%

Age

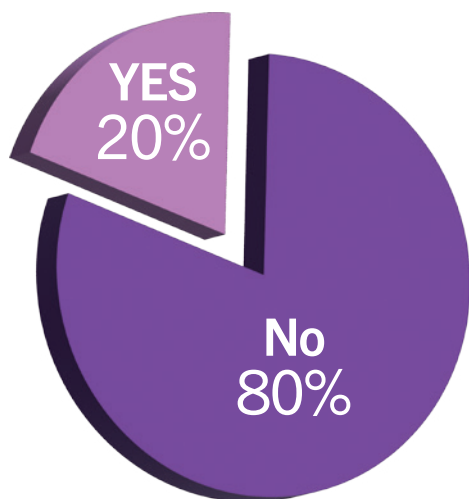

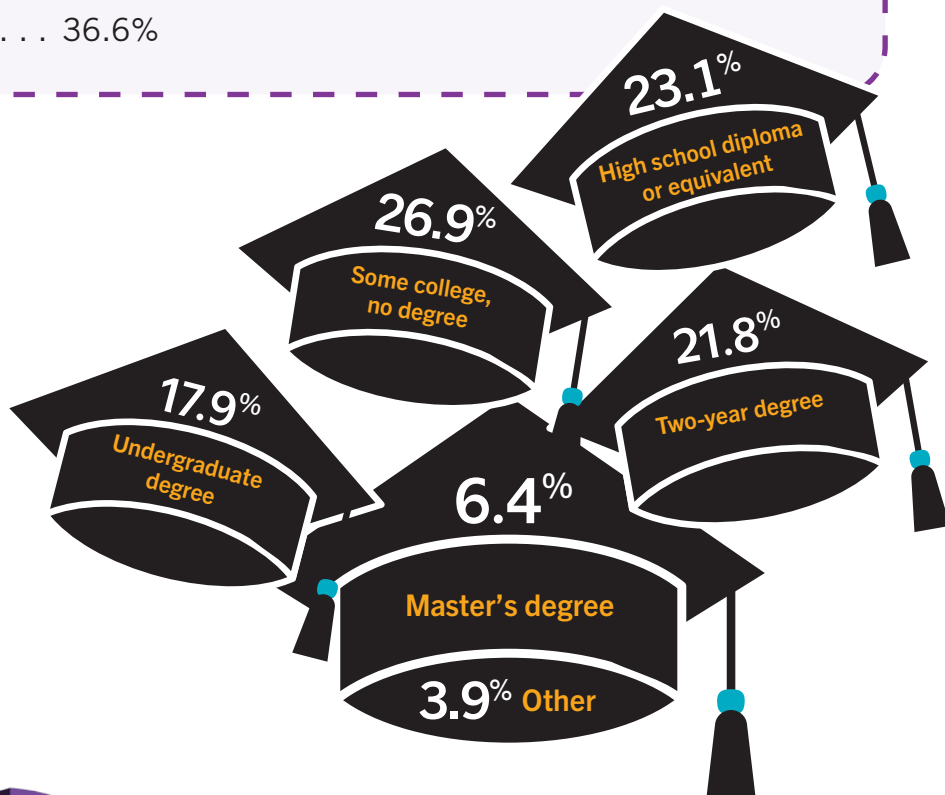

How experienced is the average sign professional?

The survey results underscore the maturity of the Canadian sign industry. With most respondents over 50, the data reflects a seasoned workforce shaped by decades of trade experience and technological adaptation. This also signals a potential generational transition in the years ahead.

Education

How much formal education do sign professionals have?

Formal education varies widely, but hands-on experience remains the foundation of most careers in signage. While some professionals hold college or university degrees, many entered the industry through apprenticeships, trade programs, or direct, practical training rather than academic paths.

Is your degree related to the sign industry?

Few professionals hold degrees specifically tied to signmaking or visual communication. This highlights how the trade often draws people from diverse educational backgrounds who learn core production, design, and business skills through experience rather than formal study.

*Professional organizations***How connected is the industry?**

Professional associations continue to anchor the industry, connecting businesses for advocacy, training, and networking. SAC remains the most common affiliation, followed by ISA and other specialized groups, showing that many companies value community engagement and professional standards.

Sign Association of Canada (SAC)	56.4%
International Sign Association (ISA)	30.8%
PRINTING United Alliance	10.3%
Letterheads	12.8%
Registered Graphic Designers (RGD)	7.7%
Association Québécoise de l'Industrie de l'Enseigne (AQIE)	7.7%
Society for Experiential Graphic Design (SEGD)	2.6%
Canadian Out Of Home Marketing & Measurement Bureau (COMMB)	2.6%
DPA	2.6%
Other	28.2%

Years in the business

How long have professionals stayed in the industry?

Longevity is a defining trait of this sector. Nearly a third of professionals have been working in signage for more than three years, reflecting deep expertise and loyalty within a relatively small, relationship-driven community.

Years with current company

Do sign professionals tend to stay put?

The data shows stability, with many professionals remaining with the same employer—or running their own company—for decades. This consistency speaks to the close-knit, often family-based nature of many Canadian sign businesses.

Position

Who’s leading the charge in sign shops?

Half of all respondents identify as business owners. From installers to project managers, the survey captures a cross-section of roles that balance creative design, technical fabrication, and client-focused service.

Owner.....	50.1%	Regional Sales Manager	2.6%
Project Manager	9.2%	Graphic Designer	1.2%
Estimator	5.3%	Installer	1.3%
Signmaker	3.9%	Fabricator	1.3%
Office Manager	3.9%	Sign Painter	1.3%
Sales Executive	3.9%	Other.....	16%

Employment status and hours

How much time do sign professionals spend on the job?

Almost all respondents are full-time workers, and many report working well beyond standard hours. The results reflect the demanding schedules of this kind of work, regardless of the position one holds in the company.

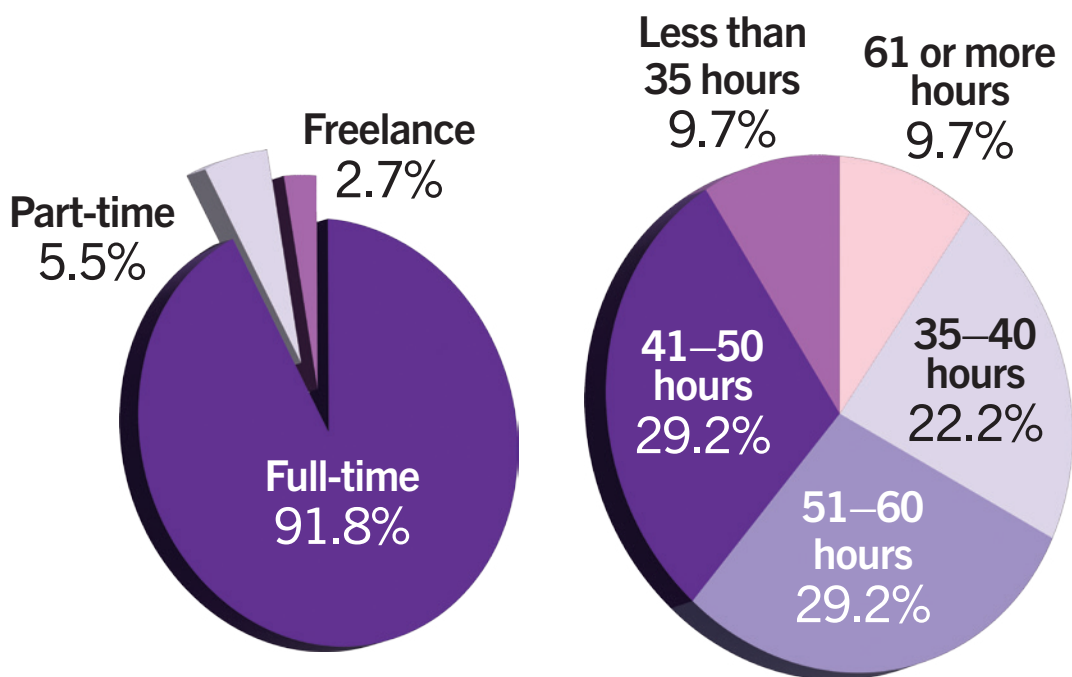

Exhibit & Display Solutions

Ariva is a 'best in class' provider of wide format print media for photo & art reproduction, point of sale advertising, display graphics, CAD, wall graphics, label, sign & banner printing and more.

ariva.ca

Supervision and pay

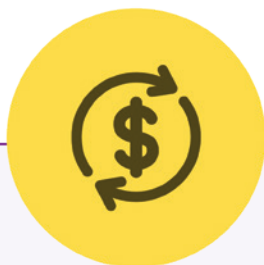

Who's managing teams—and how are they compensated?

Leadership among respondents is common—nearly three-quarters (72.2 per cent) of professionals supervise other employees. However, only a minority are paid hourly (29.2 per cent), suggesting many hold management or ownership roles with salaried or profit-based compensation structures.

Salary

How much are sign professionals earning in 2025?

Earnings remain strong, with two-thirds of professionals reporting annual salaries of \$60,000 or higher. Compensation levels vary by business size, role, and region but generally reflect the industry's skilled and specialized nature.

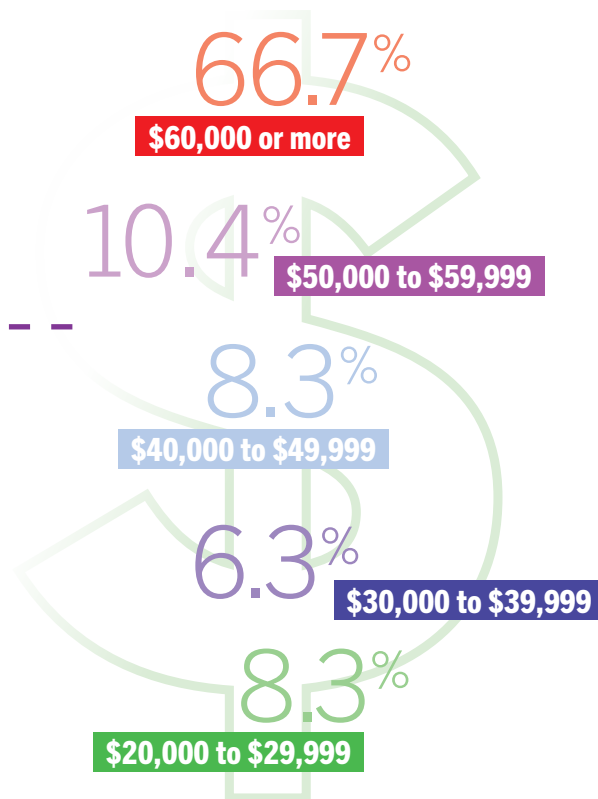

Raises

How much did respondents' salaries increase most recently?

Recent raises appear sporadic, ranging from none to roughly 10 per cent, with some owners going years without adjustments.

Key takeaways:

- Many have not given themselves raises in years, prioritizing reinvestment and business growth.
- Workload and responsibilities have increased, including management and multi-skilled roles.
- Some companies report growth, stabilization, and transition from small owner-operated operations.
- Challenges include labour shortages, market fluctuations, and competition from low-cost providers.
- Respondents generally report high job satisfaction, strong teams, and pride in company accomplishments.

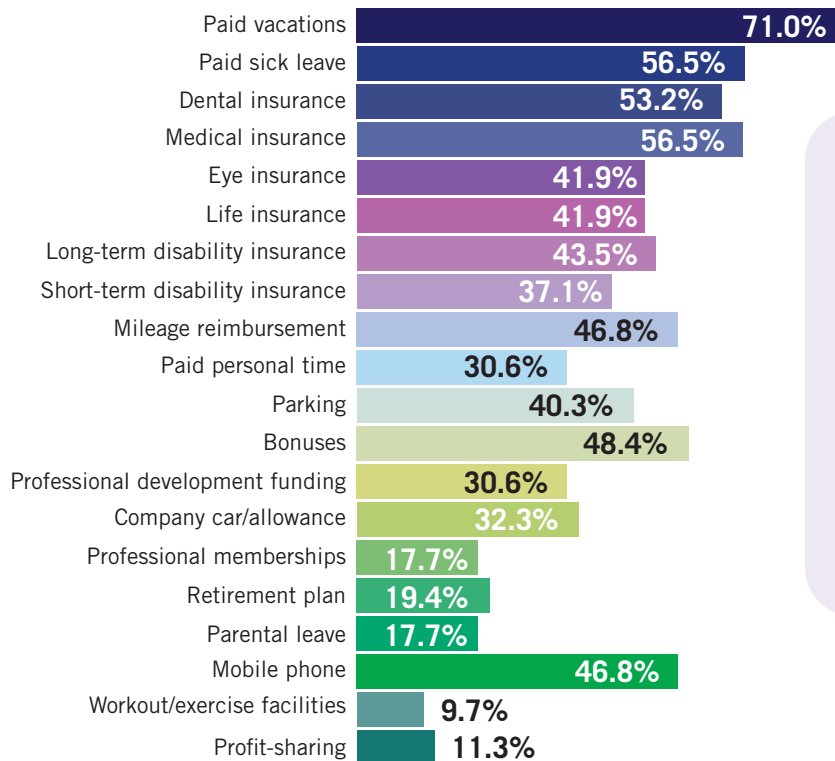

The future

Where do professionals see themselves in five years?

Many professionals expect to maintain their current positions or retire within the next five years. This finding reinforces the aging profile of the workforce and the ongoing need for new entrants to sustain the trade.

In a similar position	31.7%
In management	4.8%
Out of the industry	7.9%
Retired	42.9%
Other	12.7%

Benefits

What perks come with the paycheck?

The majority of professionals enjoy paid vacations and health coverage, but benefits such as profit-sharing, retirement plans, and wellness programs remain less common. This reflects both the small-business composition of the industry and evolving priorities around employee well-being.

Pain points

Respondents have reported certain job frustrations that highlight critical issues needing attention. Addressing these concerns is essential for improving overall job satisfaction and organizational performance.

They include:

- Difficulty finding and retaining qualified employees, especially installers and entry-level staff.
- Clients delaying or refusing payment, and demanding faster service at lower prices.
- Competition undercutting prices, often ignoring quality or compliance.
- Time pressures, last-minute requests, and heavy administrative workload.
- Balancing wages, profitability, and cash flow challenges.

The reasons for these pain points are:

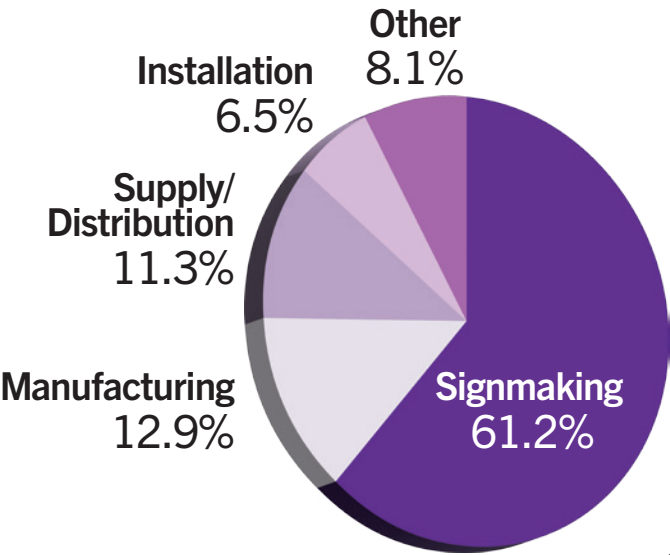

- Managing diverse personalities and keeping employees motivated is time-consuming.
- Clients and competitors pressure businesses to lower standards and prices.
- Small companies struggle with multitasking, juggling large jobs, admin, and client demands.
- Customer entitlement, unrealistic expectations, and online/instant gratification culture create stress.
- Limited margins make it hard to reward staff or maintain quality consistently.
- Industry complexity, regulatory issues, and favouritism add ongoing challenges.

Job satisfaction

Are sign professionals happy in their work?

Overall job satisfaction remains stable or improved for most professionals. The data suggests resilience despite industry challenges such as economic pressure and technological change, with a majority feeling as or more fulfilled than five years ago.

More satisfied	33.3%
Just as satisfied	39.4%
Less satisfied	27.3%

Nature of business

What kinds of work define the industry?

Signmaking remains the core activity for most companies, though manufacturing, supply, and installation play crucial roles. This diversity highlights the interconnected ecosystem that drives the Canadian sign and graphics industry.

Do you use artificial intelligence (AI) in your operations?

According to the respondents, here are the broad ways in which AI is being used:

- Some are actively using AI for design, content creation, copywriting, SOPs, emails, quoting, financial/legal research, and brainstorming.
- Others are just starting to explore it or use it to assist them in some tasks. .
- Many don't use AI due to lack of understanding, time, system compatibility, or skepticism about its usefulness.
- A few see AI as helpful for inspiration but not as a final solution.

Business scale

How much revenue does your business generate?

The responses reflect a broad range of company sizes within the sign industry, spanning from small owner-operated shops to multi-million-dollar operations. The distribution shows the diversity of businesses contributing to the sector.

Less than \$250,000	13.1%
\$250,000 to \$599,999	14.8%
\$600,000 to \$999,999	18.0%
\$1 million to \$3 million	24.6%
\$4 million to \$9 million	8.2%
\$10 million or more	6.6%
Not sure	14.7%

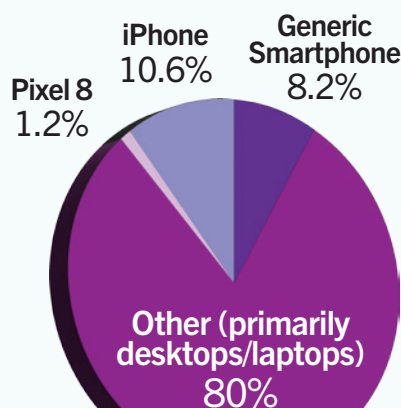

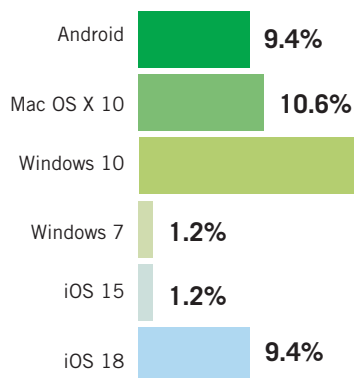

*Company size***How big are most Canadian sign shops?**

Small businesses continue to define the sector, with more than three-quarters employing 10 or fewer people. These operations often rely on local relationships and specialized skills to compete with larger firms.

1–10 employees	77.4%
11–20	11.4%
21–30	3.2%
31–40	3.2%
More than 40	4.8%

User technology profile

This data illustrates how respondents accessed the survey, providing insight into the devices, browsers, and operating systems most commonly used across the sign industry. The results suggest most participants completed the survey on desktop computers running Windows, using modern versions of Google Chrome. Mobile participation, while present, remained limited.

Device*Business scale***Operating System**

The 2025 salary survey highlights a stable, experienced, and deeply invested industry that continues to value craftsmanship and community. While wages remain healthy and satisfaction steady, the data also points to an aging workforce and a need for greater focus on succession, recruitment, and evolving benefits to attract the next generation of sign professionals. ●

CANAMEX
PROMOTIONS

Where Quality is Never Compromised

Hello, horizon

Photos courtesy Image Signs

As you drive into the Village of Valemount, B.C., nothing says “you’ve arrived” better than this standalone welcome sign. Set against the mountains, the gateway reads “Let the mountains move you” and is framed perfectly to allow you to take in the scenery.

Designed and built by Image Signs, it replaces an old, weathered wooden gateway. A strong steel-trussed frame

holds two-tiered aluminum cabinets, with pin-mounted dimensional lettering adding texture and character. Measuring 22.2 m x 7.6 m (73 ft wide x 25 ft tall), it’s a bold presence—durable, welcoming, and unmistakable.

This sign does more than mark an entrance. It sets the tone and invites exploration for everyone who passes through Valemount’s mountains and community. ●

~ Marika Gabriel
